Pre-Delivery Inspection

Your dealer will deactivate the privacy mode for you so that the vehicle is ready to send data

De-fleet vehicle

Vehicles must be removed from your system once sold after use.

Operate vehicle

Now you can use your vehicle. Data is being sent.

Legally required due to data privacy protection (GDPR).

De-fleet vehicle

Vehicles must be removed from your system once sold after use.

= your action is needed.

Legally required due to data privacy protection (GDPR).

Privacy settings after vehicle infleeted & sent data once:

Within the Order Form, customers can configure settings that ensure data is transmitted continuously – regardless of any changes made by the driver to privacy settings:

For MOD3 vehicles: with **Disable Privacy Mode (DPM)**, the services required for data delivery cannot be turned off by the driver. This guarantees that contracted data is always sent, even if the driver activates "maximum privacy" in the HMI.

For MOD4 vehicles: with Setting Privacy Mode (SPM) you as the customer define which privacy options are available to the driver in the HMI of battery electric vehicles (BEVs) in your fleet.

When setting up DPM/SPM in order form, you choose which data points are always delivered after the vehicle is infleeted.

Privacy Settings Instruction for existing fleet vehicles of all brands already delivered to customers.

Infleet vehicle

Please infleet vehicle prior to adjusting the privacy settings. Privacy adjustments done before infleeting can not be saved.

Adjust Privacy Settings

Adjust settings manually in HMI >> see step-by-step guides for detailed instructions.

ightarrow Operate vehicle

Now you can use your vehicle. Data is being sent.

De-fleet vehicle

Vehicles **must** be removed from your system once sold after use.

Legally required due to data privacy protection.

*Detailed instructions for privacy adjustments:
